

Ten years "Das Floss": Monitoring with 15-year-old Shiva FM 2306 12"/1" wedges

September 2009 – For the tenth time in a row, "Das Floss" anchored at the Kleinbasler Rheinbord above the Mittlere Brücke in Basle between July 28 and August 15, 2009. The cultural raft has become an integral part of the cultural summer programme in Basle, putting its unmistakable stamp on the Rhine bank. Besides theatre performances mainly concerts take place on the raft. Here four Shiva FM 2306 loudspeakers were used for monitoring purposes.

Stiller Has in concert (August 14th, 2009) with four Shiva FM 2306

The Shiva FM 2306 wedge monitors built in 1994 with a 12"/1" speaker configuration have already technological features like VPA, IBS, CTF, HOT, TCR, QCS. The use of modern technology and the competent product engineering by Stoll Audio results in longlasting products of superb quality and stable value. Regine Wetterwald from Sound & Light Pool (Basle) who are in charge of light and sound on the raft: "We have had the Shiva FM 2306 for a long time in our rental pool. They are popular with our clients and we too are highly satisfied. We no longer wanted to use the monitors which were employed on the raft before, as they didn't come up to our demands. The use of the Shiva monitors brought about only positive feedbacks from the artists. As expected, we could easily realise our ambition for a good stage sound thanks to the Shiva FM 2306."
