

Stoll Audio – Light & Sound 2014

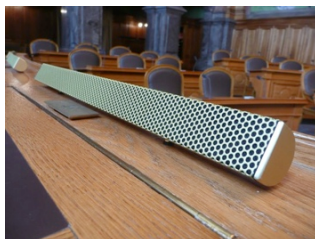

Stoll Audio has been active in the field of electroacoustics for more than 20 years. We specialise in top quality products and services.

Our endeavour is a superb quality of reproduction under very diverse conditions and at very different volume levels. Our quality convinces sound engineers and architects, musicians and organisers alike. Even at home demanding listeners take advantage of our solutions.

In doing so, special emphasis is given to integrating the actual facts of room acoustical parameters and interior design.

Our strong points lie in a broad range of individual integrated concepts for an optimised audio reproduction and sound quality.

The offering of Stoll Audio can be summarized with the following three areas:

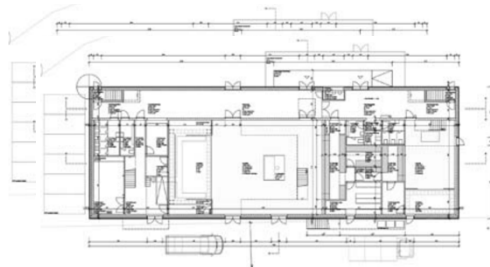

Stoll Custom Architectural Loudspeaker Systems

Even outside Europe our custom-built speakers fill parliaments, churches, museums and many other structures with clear speech and good sound. Custom-designed in cooperation with building contractors, planners and architects, we develop distinct loudspeaker systems which integrate perfectly both under acoustical and interior design aspects.

Stoll Electroacoustic Services

A newly constructed or a refurbished building, a private studio or a public event house: all questions regarding room and construction acoustics, from noise reduction measures to the expert report, will be handled by our team precisely to your wishes. The sooner you start working with us, the earlier we will be able to realise your high acoustical demands.

Stoll Top Performance Speaker Systems

Whether Eluveitie, Stiller Haas or Jan Delay: these and many other bands hardly ever sounded as good as over a PA system from Stoll. In the rental business just like in permanent installations, our advanced high-performance loudspeakers reliably deliver outstanding sound with power!

The *Master Grand* is the new large studio monitor from Stoll Audio. The 5-way speaker system is designed for highest quality demands.

Stoll Audio distributes the top quality systems of *Lab.Gruppen* since 1989.
